

Diagnosed with Synovial Sarcoma?

You Can Help Advance Research—Right Now.

Join the Synovial Sarcoma Registry and Biorepository

This important national research effort—led by the Synovial Sarcoma Foundation and Children’s Hospital of Philadelphia (CHOP)—is open to both adult and pediatric patients, no matter where you’re treated.

Why It Matters?

Your participation can lead to better treatments—and one day, a cure. By joining, you’ll help researchers understand how synovial sarcoma behaves, how it responds to treatment, and how we can improve outcomes for patients of all ages.

Participation is Easy:

- No travel required
- No cost to participate
- Open to both children and adults diagnosed with synovial sarcoma—regardless of where you receive treatment

Here’s How It Works:

Step 1: You Enroll

Fill out a short consent form and survey online.

Step 2: Your Records Are Collected

With your permission, CHOP’s research team will securely gather your medical records and, if available, a small tumor tissue sample from a prior or future surgery.

Step 3: You Fuel the Future

Your data powers research that benefits everyone facing synovial sarcoma.
